

# INSTRUCTION

**1**

Both metal plates **1** with 6 flat head screws, 2 mm thick plastic discs and plastic sheetings vorrichten (spiegelbildlich)

Put it on the ground **1**

**2**

Then put on the rod (arc to the top) and respectively 6 Plastic sheetings. (mirror-image for the left and right side). Rod **2** (short rod), rod **3** (with drilled hole for strut), rod **4 5 6** (swiveling rod), rod **7** mount at the end.

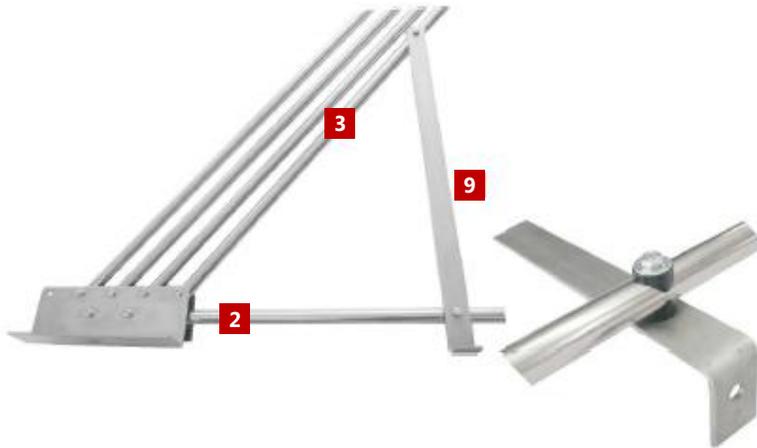

**3**

Put on the base plate **8** and locking nuts on the flat head screws. Nuts with plastic ring for rod **2** and **3** pull tight, for the swivelling rod **4 5 6** only pull slight, to guarantee the swivelling.

4

Strut **9** respectively fix on rod **3** and **2**, use slotted screws M6 x 35, metal-u-disc, plastic sheetings and nuts (without plastic ring)

- 2 x  slotted screw
- 4 x  metal-u-disc
- 4 x  nut
- 8 x  Plastic sheetings

5

Rods **2** respectively put in the hem of the plan (apse side). The velcro must be in the inside. Then patch the rods together.

6

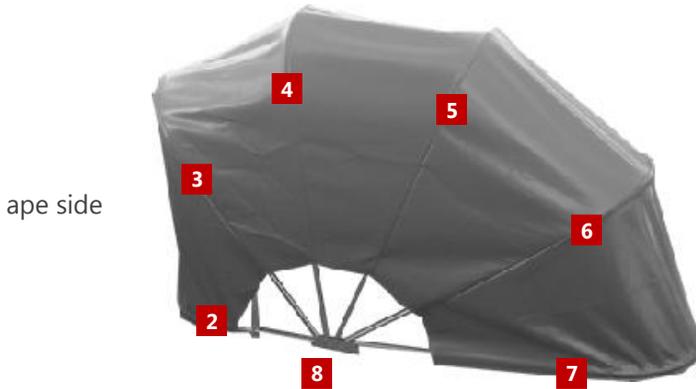

Before you put the plane over the rods, you should fix the base plates **8** (holes distance 108 cm) and then the struts **9** on the ground. From hole to hole there is a distance of 108 cm.

- 4 x  screw
- 4 x  nut
- 4 x  washer

7

Put the rods **7** respectively on both sides into the hem of the plane and fix it on the base plates **8** put the rods together.

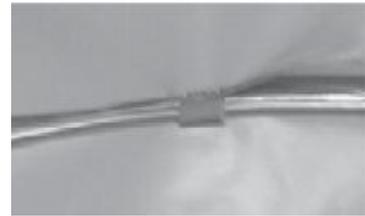

- 2 x
- 4 x plastic sheetings
- 2 x u-disc
- 2 x Locking nut

8

Fix the plane at the rods **3 4 5 6** with velcro. Note that the plane you should uniformly implement into the rods **2** and **7**

If you open the garage, move rod **4** laterally to rod **3**. Don't use rod **7** to open the garage.
